Notable Projects

<i>Project Description</i>	Create a new page for Yelp Channel Partners to claim businesses. Build a safe and traceable system to prevent ineligible claims.
<i>Role</i>	Software Engineer
<i>Field of responsibility</i>	Full Stack Development Project Lead
<i>Involved technologies</i>	React, GraphQL, Python, MySQL

<i>Project Description</i>	Designed and developed a migration from unreliable bulk processing tools in the main monolith to a new queue based system. Lead projects to migrate old jobs to this new system and to migrate from other legacy systems to this new system, while at the same time increasing the functionality of these jobs. Integrate into the organization's platforms for reliability, security, logging, audit, and scalability. Enable other teams to use this service and framework to migrate from their custom solutions to this new unified solution. Served as the go-to expert on the system.
<i>Role</i>	Software Engineer
<i>Field of responsibility</i>	Full Stack Development Project Lead Migration and Feature Development
<i>Involved technologies</i>	Python, SQS, React, MySQL

<i>Project Description</i>	Internal Business Activity Management Application. Working with SAFe methodology with 3+ remote located developments teams.
<i>Role</i>	Team Lead
<i>Field of responsibility</i>	Team Lead of a Scrum Team of 4 Full-Stack Development Interims Scrum Master (3 months)
<i>Involved technologies</i>	.NET Core, TypeScript, Angular, MS SQL Server
<i>Industry</i>	Aviation

<i>Project Description</i>	Develop an internal communication platform for live-communication and solution management of operationally and safety relevant incidents. Approx. 5k online users 24/7, with requirements for 99.95% availability.
<i>Role</i>	Technical Architect
<i>Field of responsibility</i>	Full-Stack Development, Responsible for CI/CD, DevOps Responsible for the integration of internal and external services Supervisor of two developers Evaluation of new technologies (e.g. automatic multi-language support, NLP) and architecture
<i>Involved technologies</i>	TypeScript, Angular, Ionic (mostly Web and Android), node.js, Docker, Kubernetes, Helm, Jenkins, SonarQube, GitLab CI, Ansible, Python Scripting
<i>Industry</i>	Transport & Travel Services

<i>Project Description</i>	Create microservice to consume data from a Queue, transform the data and deliver the data to various queues.
<i>Role</i>	Software Developer
<i>Field of responsibility</i>	Development of the algorithm to transform the data and test cases. Setup reporting with Kibana and Elasticsearch. Support DevOps with Kubernetes charts and RabbitMQ clustering.
<i>Involved technologies</i>	Java, RabbitMQ, Gradle, Spring, FindBugs, Docker, Kubernetes, Kibana, Elasticsearch, C#
<i>Industry</i>	Transport & Travel Services

<i>Project Description</i>	Create a system to centralize data export and report creation of financial data.
<i>Role</i>	Software Developer
<i>Field of responsibility</i>	Development of the Application UI to Import and Export data Development of Import and Export Capabilities, complex Reports
<i>Involved technologies</i>	C#, ASP.NET, Entity Framework, HTML, CSS, RDLC Reports, FOP
<i>Industry</i>	Public

<i>Project Description</i>	Digitalize and integrate the movement of a warehouse in the ERP system of the customer. Manage open orders and capacity utilization with mobile scanners.
<i>Role</i>	Software Developer
<i>Field of responsibility</i>	Design and Development of proof-of-concept Design and Development of the customization in the ERP system Design and Development of the mobile Application and middle tier server Analysis of the customer requirements
<i>Involved technologies</i>	C#, Windows Mobile 6.5, Dynamics NAV 2009 R2, WCF, ASP.NET
<i>Industry</i>	Consumer Goods & Services
